

RightFax XML Connector for MFPs

The OpenText RightFax XML Connector for MFPs allows you to scan documents on XML-capable Multifunction Printer (MFP) devices and deliver them via your RightFax server. This adds faxing capability to your MFPs and saves the expense of pricey fax kits. It also enables secure email via the OpenText RightFax Secure Documents Module.

When a user scans a document, the MFP generates an XML job file as well as image files, and then sends them to RightFax for delivery. RightFax sends the document via fax or secure email, and then provides a notification back to the MFP or to an email address.

Supported Models

Any MFP that can scan a paper document and deliver XML and corresponding image files to RightFax with necessary metadata.
